# Description

- Provides information on a few subjects in law that don't *necessarily* require a lawyer in order to move forward
- Mainly, it allows those who have been issued traffic citations to use an online portal to enter their ticket information, and then receive a ticket recommendation, which is when the infraction is lowered to a non-moving violation.

# Features

- User Login
- Progress updates
- PayPal pay portal
- Interaction between web app and pdf maker
- Database of tickets tied to each user

# Planning - User Stories

- This idea was born out of many clients voiced frustration with having to drive to law offices or, in general, deal with too many people to get their tickets reduced
- Provides a cheap, hassle-free alternative that is all online and avoids direct human-to-human interaction

# Planning - Database

- The database consists of users of the site, with a one to many relationship regarding their tickets, as there may be multiple per person
- Admin functionality in order to correct any user input error

# Technology Stack

- Language: C#
- Visual Studio 2017
- ASP.Net Core MVC
- SQL Server database
- HTML/CSS

# Dem o-To Com e Later!

# What I Will Learn

- Connection to PayPal Api
- Interaction between Adobe or other pdf maker to draft the letter to the court required to go from traffic citation to ticket recommendation
- Admin privileges

# What's Next

- Search Engines tailored to law specific results for the pages with information only
- Make it pretty
- See if there is a way to take the completed pdf generated from the user entering their ticket information and to send that pdf on to the court without any further action from the admin.
